A l'ère du Big data, où l'on traite un nombre toujours plus important de données, notamment en santé, des voix s'élèvent désormais pour demander à ce que les individus disposent d'un droit de propriété sur leurs données de sorte à ce qu'ils puissent tirer un bénéfice de l'exploitation commerciale de ces dernières. Partant, la production d'un modèle juridique alternatif est en discussion. Les questions sont alors nombreuses : est-il opportun d'élaborer un droit de propriété sur les données ? À quelles conditions et pour quelle efficacité en termes de protection des personnes ? Quels en seraient les inconvénients ? Quels autres mécanismes juridiques peuvent-être envisagés ? Ces questions seront au cœur de la session proposée.
